

# OUTPERFORMING FILTRATION DEMANDS OF TODAY'S HYDRAULIC SYSTEM TECHNOLOGY

## FMMX

NEW High pressure in-line filter series, pressure to 6090 psi and flow to 40GPM. Patented **MYCLEAN** filter element design assures original elements over machine life.

## ELIXIR HFEX

508 psi in-line filters and flow to 80 gpm. Spiral flow head design, and patented **MYCLEAN** filter elements provide longer service life and assures original elements over machine life.

## MPFX Series

Tank mount return filters with working pressure up to 116 psi and flow to 238 gpm, multiport options, removable bowl and element with OEM specific design capabilities.

## ICM 4.0

WiFi capable sophisticated software suite - monitors the status of your hydraulic filtration system in continuous real-time, with critical early warning detection.

## LPA3

Portable optical and photodiode APC for fast and accurate particle monitoring of hydraulic fluids to identify risks before they impact the performance of the hydraulic system.
